

ALL LAND ROVER LEAF SPRING MODELS (EXCEPT 101), FRONT SPRING, REAR EYE

All Land Rover leaf spring models (except 101). The rear eye of the front springs

You will find that Land Rover have welded spacers to the inside of both the shackle plates where the spring eye bolts on.

Because of this it is necessary to insert plate washers between the shackle plate and the spring eye bush type 1L. Otherwise the bush may ride out over the spacers.

To ensure that the shackle plates are parallel, it is also necessary to insert plate washers between the shackle plate and the chassis bush 1M or 1N. There are therefore eight plate washers included in the kit.
